How we use technology safely

We promote the importance of online safety.

We are committed to developing a culture where children and staff use technology safely. To do this we:

- help children develop an understanding of the digital world
- lead by example and model safe behaviours
- maintain professional standards
- support parents and carers to understand more about online behaviours.

We encourage healthy and positive use of technology.

To support learning, creativity and communication, we will always:

- use approved work devices with appropriate security settings
- ensure apps and content are age appropriate
- carefully supervise children while they use technology.

We respect privacy.

As Article 16 of the United Nations Convention on the Rights of the Child (UNCRC) says children have a right to privacy. With all of our images and videos we will:

- only create and share with parental consent
- store safely and securely
- follow our photography and video guidelines.
